PANTS

Mini packaging size

Premium price segment 20% higher price per diaper compared to the Premium Cotton line

BASIC LINE

AIR DRY DIAPERS

The first diapers in Europe produced with the innovative AIR DRY technology were specially created to enable quick absorption and dry baby's skin. The surface of the diaper is made of soft pads for faster distribution of liquid and its even distribution along the entire length of the diaper.

This Japanese technology reduces the area of the diaper that is in contact with the baby's skin by at least 50% and thus remains dry for a longer time

SGS COURTRAY French laboratory gave them the highest rating - class A!

Formaldehid elemental chlorine dioksin

DIAPER PANTS

Developed in accordance with the wishes of mothers who want their children to grow up with products of the highest standard of safety and quality, Violeta provided the best quality diapers in the form of panties.

CHARACTERISTICS

PANTS

The soft air layer helps in the flow of air and removing residual moisture, and in that way allows the skin to be dry at all times.

More than 700 cotton pores provide exceptional softness every time it touches the baby's skin. The top layer is made of natural cotton that almost 100% prevents skin irritation.

The wetness indicator will ease worries and show when it's time to change the diaper by changing color from yellow to green.

Flexible diaper panties are maximally adaptable and adapt to the most demanding children's movements.
